

## Abstract of the Disclosure

A clipon bracket for coupling a handlebar to a motorcycle fork tube using only a single bolt. A clipon assembly including the clipon bracket, a bar, a bar cap, and a pinch bolt. The clipon bracket includes a fork tube and a bar tube, with the bar tube being external to and substantially perpendicular to the fork tube. A split extends through the bar tube substantially perpendicular to its axis, dividing it into two tubular halves, and extends through one wall of the fork tube. The pinch bolt draws the handlebar and the bar cap into opposite ends of the two tubular halves of the bar tube, pinching the split closed and thereby tightening the fork tube onto the fork leg, using only a single pinch bolt.
